

680mm RISER RAIL CHROME

Riser rail fitting instructions

1. Establish height of riser rail to suit user's requirements.
2. Remove caps from the brackets.
3. Mark the wall where the lower bracket is to be fixed ensuring there are no pipes or cables.
4. Drill and plug the wall and fit the lower bracket.
5. Fit the rail through the lower bracket. Place the remaining bracket on top of the rail making sure the plastic shield is at the back and the holes are aligned. If replacement riser, fix and screw into existing hole. If new installation, ensure the screw hole position is vertically aligned using a spirit level and mark the wall. Remove the rail from the lower bracket then check for pipes or cables before drilling and then plug the wall. Insert the rail into the lower bracket and upper bracket like before and screw into the wall.
6. Refit caps.
7. Adjust the height as desired.
