Specifications

The taps is suitable for use at water supply pressures of 0.1 bar (min.) to 5 bar (max.).

This taps should be installed in compliance with Water Regulations. For further details contact your Local Water Authority.

- Identify all components and check pack contents.
- Turn off water mains supply.

Installation

- Fit Fixing Stud (4) to Tap Body (1) and tighten it.
- Make sure that Sealing Washer (3) has been fitted to Flange (2). Fit Flange (2) to the Tap Body (1).
if the Flange (2) is not supplied, fit Sealing Washer (3) directly to the Tap Body (1).
- Screw 2x Braided connectors (8) into Tap Body (1) , do not over tighten.

4. Locate the tap assembly down through the tap hole in basin.
5. Fit Rubber Horseshoe Washer (5) and Metal Horseshoe Washer (6) onto the Fixing Stud (4). And then fix Fixing Nut (7) onto the Fixing Studs (4).

Do not over tighten.

6. Fit Braided Connectors (8) to the water supply using suitable plumbing joints.
7. Turn on the hot and cold and mains water supply. Check for leaks immediately. It is always advisable at this stage to flush out the system. To do this, open both valves fully and allow water to flow for approx. 1 minute. This will remove any foreign matter within the installation.

8. Finally turn on all the water heating arrangements.

Note: Tap head shown is for illustration purposes only.

Aftercare

Whilst modern plating techniques are used in the manufacture of these fittings, the plating will wear if not cleaned properly. The safest way to clean your product is to wipe with a soft damp cloth. Stains can be removed using washing up liquid. All cleaning powders and liquids will damage the surface of your fitting even the non-scratch cleaners.
